Meter Pits

Meter Pit

The Meter Pit offers a real cost-saving alternative to the standard “build-your-own” pit setting. The Meter Pit has the service lines attached firmly to the pit walls, with all the valves and meter coupling materials necessary to install the meter.

The theory of pit design is that the depth of the service shall be below that of the deepest frost level and the heat from the base of the meter pit shall circulate and keep the meter setting above it from freezing.

In the Meter Pit, the meter setting lines are kept a minimum of two inches from the pit wall thus providing protection of riser pipe freeze ups due to “frost jump” from the pit walls.

METER SIZE	PIT SIZE	PRODUCT NUMBER	
		HEIGHT OF PIT	
		48"	60"
$\frac{5}{8}$ ", $\frac{5}{8}$ " x $\frac{3}{4}$ " & $\frac{3}{4}$ "	18"	53763 2PE	53767 9PE
1"	21"	53771 15PE	53771 17PE

NOTES:

- Order Single and Double Lid Meter Pit Covers from page H-47.
