### Services Include:

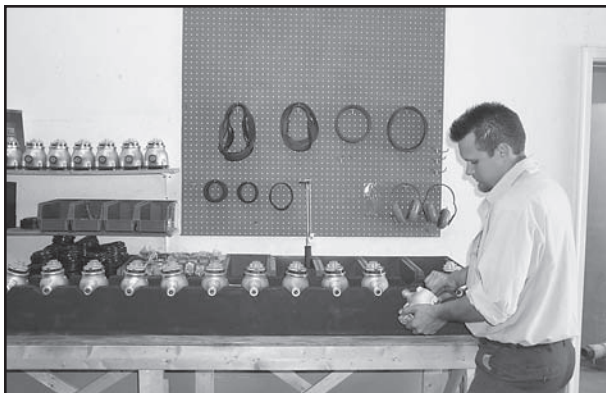

- Turnkey Meter & Backflow Installation
- Full-Service Meter Test Shop
- Certified Backflow Testing
- On-Site Field Testing of Large Water Meters
- Variety of Rebuilt Meters Available For Sale

A service we provide is MIP (Meter Insurance Program). It consists of upgrading your existing Invensys SR or SRII meters. Direct read meters and generator meters are upgraded to Electronic Communication Registers (ECR). This ECR register can then be used for TouchRead®, RadioRead® or PhonRead®... whichever reading system meets your needs. Your old meter bodies are stripped, sandblasted and painted. New registers, measuring chambers and gaskets are installed. This program allows you to receive the best technology in the industry at a reduced cost, taking advantage of your previous investment in Invensys meters. MIP meters are covered by the same new Meter Guarantee.

Testing meters at regular intervals is a good idea, but testing them when you doubt their accuracy or if you have a complaint is a must! We will be glad to assist you with your meter testing in a timely manner so that there won't be a long interruption in service.

All meters are tested in accordance with AWWA recommendations and all testing equipment is certified by the New Hampshire Bureau of Weights and Measures.

**An inaccurate meter is lost revenue.**
