Large Meter Tester

The Portable Large Meter Tester provides a fast, efficient way to accurately test large water meters without removing the meter from the line. Compact and easy to handle, the W-125 tester weighs only 45 pounds and comes complete with everything needed to field test virtually all water meters 1½" to 8".

The Tester assembly consists of a ½" SR II® meter for measuring low flows and a Turbo-Meter for measuring high flows. Both meters can be equipped with an optional sealed Resettable Electronic Register (RER). The RER's LCD display gives the rate of flow down to .1 gpm on the ½" size meter, eliminating the need for manual test rings and a stop watch. Flow rates are easily controlled by two positive opening valves. A pressure gauge is included to measure line pressure. Fire hoses, thread adaptors and fittings are also part of the package.
