

Flexible Couplings & Saddles K-2

Caps and Manhole Adapters

Flexible Cap

- Fast, easy installation
- Permanent or temporary cap
- For underground or above-ground use
- Low cost and reusable

Caps offer a quick, easy way to cap pipe ends, cleanouts and open test pipes. Made of flexible PVC, they're suitable for either above ground or underground use on cast iron, steel, copper or plastic piping.

Caps are designed to fit all drain, waste and vent pipe materials in a given nominal size. The convex face allows the cap to withstand greater pressure for testing purposes and minimizes ballooning.

To install, simply place over open end of pipe and tighten to 60 inch lbs. torque.

Concrete Manhole Adapters

Concrete Manhole Adapters (CMA) help eliminate leaks around pipe entering manhole walls, yet are flexible enough to permit lateral pipe movement without destroying seal integrity. It is particularly useful for pipe to which concrete will not adhere, such as plastic pipe.

The CMA is made of elastomeric PVC, is corrosion proof and is unaffected by acid or alkali. Because the CMA may be subjected to various conditions beyond the manufacturer's control which can affect its ability to seal, discretion must be used in its application and installation.

Due to the various factors that can influence the CMA's effectiveness as a seal, (high water tables, quality of grout, workmanship and field conditions) Fernco does not warrant this product as a positive water seal.
