

Muni-Ball® Plugs & Accessories

Factory Replaceable Sleeve Multi-Size Muni-Ball® Plugs

Four sizes of this by-pass design plug seal pipes from 6" to 36" in diameter, making this Muni-Ball® one of the most versatile plug designs. The sleeves are replaceable by the factory which insures a longer plug life.

The bypass design allows uninterrupted flow through a detour hose while the pipe is being repaired or tested.

All Factory Replaceable Sleeve Multi-Size Muni-Ball® Plugs can be easily converted for line acceptance and leak location testing with Air-Loc® Conversion Kits shown on the right.

WARNING: Test Balls are designed for low pressure air testing. Test pressures decline as ball diameter increases. Check manufacturer's recommendations before inflating test balls and pipeline.

Air-Loc® Muni-Ball® Conversion Kits

Air-Loc® Muni-Ball® Conversion Kits replace the threaded plug in all Muni-Balls® thus converting them for use in either Line Acceptance or Leak Location testing.

Air-Loc® Line Acceptance Kit
